

How To Support Global Compliance with SDS Regulations

Stay compliant, stay safe!
Here are the key elements for successful SDS management:

1. Effective Management of SDS Processes

- Compliance with regulations
- Site-specific analyses
- Centralized SDS library and chemical register

2. An Updated and Accurate SDS Library

- Responsibility for SDS management is assigned to a dedicated person or team
- SDSs are stored in a central, digital register
- SDSs are regularly reviewed and updated to the latest versions

3. Thorough Chemical Inventory

- Correct labeling and storage
- Expiration monitoring
- Risk assessments of individual chemicals

4. Correct Chemical Approvals

- Appropriate use of chemicals
- Proper handling and disposal of restricted chemicals

5. Process for Introducing New Chemicals

- A defined process is in place for introducing new chemicals onsite
- A safety data sheet is in place
- New chemical risk assessments are completed and available

6. Right-To-Know Access for Your Workers

- All workers have 24/7 access
- SDSs are available at point of need
- Regular training is carried out on how to handle chemicals and use SDSs

If you need EHS technology solutions or SDS management support, **we can help.**
