Incident Management

The Chicken and The Egg

Incident Management or Incident Prevention?

It's an age-old question: **which came first, the chicken or the egg?** But in this case, we're talking about which method organisations should prioritise when managing health and safety: incident management or incident prevention?

Q1

Incident Management vs. Incident Prevention: What's the Difference?

Incident management involves identifying, recording and responding to workplace injuries and illnesses.

Incident prevention involves making and implementing policies and procedures to prevent incidents.

Most organisations put the chicken before the egg. They use incident management to inform health and safety actions because it's easier to act on existing data.

But devoting resources to prevention can **reduce incidents, improve employee performance and save time and money.**

Q2

Why Do Organisations Lead With Incident Management?

Q3

How To Lead With Incident Prevention In Your Company

Encourage hazard reporting

Offer continuous safety training and coaching

Conduct regular risk assessments

Remove unsafe machinery, substances and tools from workplace

Show employees that management addresses hazard reports

Implement easy-to-use software

Software can **streamline your incident prevention systems**, making it easier for employees to report hazards, access risk and hazard data and learn about safety

Q4

How Can Software Help?

If you need EHS technology solutions or metrics management for ESG reporting, **we can help.**
